THEATRE OF
THEATRE ROYAL PLYMOUTH
SCIENCE

The THEATRE OF SCIENCE will examine why it has never been more important to understand science.

This year-long project has developed two new plays for the Drum Theatre (*Seeing Without Light* and *Still Life*). It also involves multi-media showings at TR2, a large participatory science drama programme in 12 schools across Plymouth and Cornwall, two community arts initiatives, workshops for new and emerging artists as well as a programme of talks and events for theatre audiences.

The project will culminate in *Imagining the Future* - a chance for playwrights, film-makers and research scientists to work together and to share their work with local audiences.

To find out more about how to take part, please call the Arts Development and Education Department on 01752 230312 or click on www.theatreroyal.com
